Art Unit: 3722

1. Claims 11-13, 16-18, and 36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Line 3 of claim 11 recites a "second worm wheel," but it is noted that a first worm wheel has not been set forth. Claim 36 improperly depends on claim 36. It should depend from claim 34.

2. Applicant's arguments with respect to claims 10-13, 16-19, and 27-38 have been considered but are moot in view of the new ground(s) of rejection.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 10, 19, 27, and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese '583. The larger diameter area on the left side of figure 1 is considered to be the first base member, and the smaller diameter area on the right side of figure 1 is considered to be the second base member. The gear teeth on pinion 5 and gear 4 provide a first increase in rotational force, and the threads between gear 4 and member 6 provide a second means to increase the force and to drive member 6 axially and perpendicular to pinion 5. The front end of member 6 has a first conversion member having inclined surfaces 12 which engage with slots 11 in jaws 8 to move them radially. It is clear from figure 2 that the chuck has a six jaws, such that a jaw will be opposed to each of the three jaws shown.

5. Claims 10 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Arnold. The lower part of the chuck body in figure 3 is considered to be the first base member, and the

Art Unit: 3722

upper part of the chuck body in figure 3 is considered to be the second base member. Pinion 37 has teeth meshed with teeth on gear 27, and the gear 27 has threads 45 which move conversion member 46 axially to move the chuck jaws radially. Note the engaged sloping surfaces between member 46 and the jaws.

6. Claims 10, 19, and 27 are rejected under 35 U.S.C. 102(b) as being anticipated by French '940. The rear part of the chuck body in figure 1 is considered to be the first base member, and the forward part of the chuck body in figure 1 is considered to be the second base member.

Pinion 5 has teeth engaged with teeth on gear 3, and gear 3 has threads which move member 2 axially. The front of member 2 has inclined surfaces engaged with jaws 9 to move them radially.

7. Claims 30-35, 37, and 38 are allowed.

8. Claims 11-13 and 16-18 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

9. Claim 36 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

10. Claim 28 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

11. Any inquiry concerning the content of this communication from the examiner should be directed to Daniel Howell, whose telephone number is 703-308-1728.
